Not Avail, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1972 Excerpt: .operation since dispersion with both the attrition scrubber and vertical pump must have degraded the operation significantly. Demonstration 10 took place with a bypass of the attrition scrubber using a metal sluice. Sand was fed to the plant at 19 tons/hour (No. 4 fuel oil at 7, 020 ppm) with a total process water rate of 440 gallons/minute (a flotation residence time of 3.8 minutes with all six cells active) and an aeration rate of 280 cubic feet/minute. The feed water, cleaned sand, and exit water analyzed respectively at 273, 106, and 496 ppm oil for this demonstration. Given the relatively high feed oil concentration, continuing dispersion by the vertical pump, and a low flotation residence time, these results are quite good. Demonstration 11 involved a very high sand feed rate of approximately 60 tons/ hour with a No. 4 fuel oil concentration of 5,110 ppm. The total process water rate was 395 gallons/minute with scrubber and flotation residence times of 3.4 and 3.7 minutes respectively. Aeration was again set at 280 cubic feet/minute with all six flotation cells active. Although pine oil had an aesthetic impact in the previous tests (it definitely masked the smell of residual oil and possibly decreased the oily feel of the cleaned sand and exit water), its use was discontinued as of this test since it had no apparent effect in aiding in removal of oil from beach sand. The results of the test were 1,992, 389, and 2,141...
