

Noninvasive Technologies for the Diagnosis of Coronary Artery Disease in Women: Future Research Needs: Future Research Needs Paper Number 41

Filesize: 1.61 MB

Reviews

A really great publication with perfect and lucid explanations. Of course, it is play, continue to an amazing and interesting literature. I discovered this book from my i and dad suggested this publication to find out.

(Dr. Augustine Borer)

NONINVASIVE TECHNOLOGIES FOR THE DIAGNOSIS OF CORONARY ARTERY DISEASE IN WOMEN: FUTURE RESEARCH NEEDS: FUTURE RESEARCH NEEDS PAPER NUMBER 41

To download **Noninvasive Technologies for the Diagnosis of Coronary Artery Disease in Women: Future Research Needs: Future Research Needs Paper Number 41** PDF, remember to click the link beneath and download the ebook or have access to additional information which might be related to NONINVASIVE TECHNOLOGIES FOR THE DIAGNOSIS OF CORONARY ARTERY DISEASE IN WOMEN: FUTURE RESEARCH NEEDS: FUTURE RESEARCH NEEDS PAPER NUMBER 41 book.

CreateSpace Independent Publishing Platform. Paperback. Book Condition: New. This item is printed on demand. Paperback. 54 pages. Dimensions: 11.0in. x 8.5in. x 0.1in. Cardiovascular disease is the leading cause of mortality for women in the U. S. According to the American Heart Association (AHA), approx. one in three female adults have some form of cardiovascular disease. AHA suggests there is evidence showing that women at risk for coronary artery disease (CAD) are less often referred for the appropriate diagnostic test than are men. Coronary anatomy and pathology have traditionally been defined and identified by coronary angiography, a procedure that is indicated in patients who have chest pain and are at high risk for CAD. For intermediate-risk patients, clinicians have a wide range of noninvasive technologies (NITs) to choose from that can assess functional status (i. e. , ischemia or no ischemia) or visualize anatomic abnormalities. Functional modalities include stress electrocardiography (ECG); stress echocardiography (ECHO); and stress radionuclide myocardial perfusion imaging, including single-proton emission computed tomography (SPECT) and positron emission tomography (PET). Anatomic modalities include stress myocardial perfusion and wall-motion cardiac magnetic resonance (CMR) imaging and coronary computed tomography angiography (coronary CTA). The comparative safety and accuracy of these NITs in women was uncertain, although substantial data exists for populations combining men and women, and for mixed populations of known and no known CAD. In 2012, a Comparative Effectiveness Review, Noninvasive Technologies for the Diagnosis of Coronary Artery Disease in Women, evaluated the diagnostic accuracy and risks of NITs in women with symptoms suspicious for CAD, including assessing predictors affecting test accuracy, and the ability of NITs to provide risk stratification and prognostic information, inform decisionmaking about treatment options, and affect clinical outcomes. For women with no known CAD, the summary of accuracy for each NIT modality compared with coronary angiography was...
